

MRO MAGAZINE HIGHLIGHTS JASON MONTREAL IN JUNE 2012 ISSUE

MRO Magazine, a prominent Canada-based publication focusing on maintenance, repair and operations of industrial machinery and equipment, recently highlighted Jason Montreal and the expansion of their warehouse in the June 2012 issue.

Following is a full transcript of the article.

“Dorval, QC - Jason Industrial, a manufacturer and distributor of timing belts, synchronous belts, power transmission belts, belt drives, urethane belts, pulleys, and industrial hose and coupling products, has expanded its warehouse in Dorval, west of Montreal.

Louise Adams-Parrino, administrator for the facility, recently gave MRO a tour, where she said the bigger warehouse means Jason can carry more products and more inventory, so it is able to give better service to its customers, thus making it a more viable company in Canada.

Jason offers over 300,000 different types of products, including belt products that come in sleeves, giving the warehouse the ability to cut to multiple belt sizes in-house, as well as do splicing.

The investment in technology in the new facility includes Wi-Fi throughout and smart televisions for accessing Skype online, making meetings and training seminars between offices a more economical and time-efficient solution.

The company prides itself on the loyalty of its employees and its commitment to superior products and services. Jason started in Canada in 1971 with one sales person on the road and three others working in a 5,000 square foot office in Montreal. It moved to its current location in 1980 and now has over 31,000 square feet of space and has grown to a total of fifteen employees.”

Jason Industrial continues to grow in Canada
